- ✓ Printing ink, printing ink sludge
- ✓ Glue, adhesives and sealants
- ✓ Packaging with paint, glue and varnish residue

Is not to contain

- ✓ Solvents
- ✓ Products with isocyanates
- ✓ Organic peroxides products

Description: Paint, glue and varnish are hazardous waste and is subject to delivery and declaration requirements mentioned in the [Waste Regulation](#). This also applies to the packaging if it is not empty and dry.

Collection: Containers, drums, and pallets with frames that are plastic-lined on the inside. Waste producers (customers) must declare the waste on their own form. The waste can only be delivered to facilities authorized to accept hazardous waste. It is important not to stack paint cans over the pallet frame.

Processing: The waste is sorted by type, texture and packaging type.

Recycling: Hazardous waste is to be taken out of circulation and is not to be recycled.

Non-compliance: A sorting fee may be charged if the item is not sorted into a homogeneous fraction. If sorting is not possible, the entire delivery can be reclassified. The driver will not take hazardous waste if the declaration is not completed.

Reference to regulations: [Waste Declaration](#) _ [Hazardous waste](#)

Please note: Hazardous waste contains substances that are hazardous to health and the environment and must be properly processed so that environmental pollutants do not spread and accumulate in nature. Hazardous waste should not be mixed with other wastes. Households and individuals are to deliver all hazardous waste to municipal waste reception schemes. Businesses are to declare and deliver hazardous waste to approved waste reception facilities.
